

Ring of Defense 4: **Wall Mounted Air Scrubber**

STRENGTHEN YOUR PROTECTION & LEAVE NO STONE UNTURNED

- The STAT Air Scrubber, unlike traditional air purifiers, is not pulling in air from the environment.
- Instead, they are safely projecting ions into the air that attach to the finest particles of bacteria that traditional air purifiers may find challenging to capture.
- This is a process called **flocculation**, that causes the tiny virus particulates in the air to clump together to form harmless, heavier particles that simply fall to the ground.
- This is the single most effective way to simply eliminate airborne pathogens, especially in areas where people may congregate. Most facilities have no control over such behavior once members/visitors enter a space.
- This device is mounted to the wall, around 7 feet off the ground, and is maintenance free.
